MONOPOLY

## Monopoly as a Terminal

Monopoly is a complete market data monitoring tool for the investor who demands immediate and accurate feed. The user friendliness and functionality provide the end user with a dynamic and complete picture of the markets in the most comprehensive manner. The customization features, the simple-to-use service along with the numerous real time news feeds etc., make Monopoly the leading Real Time Market Data Monitoring System. Monopoly is the only Greek RT Screen that is ISO 9001 certified.

## Dynamic update

**Monopoly** is the reliable real time data monitoring service of the Greek and Cypriot markets. Its unique flexibility and customization capabilities are highly appreciated by the end users, both professional, retail investors and intraday traders.

Monopoly's advanced characteristics enables traders to adjust the system's functionality to specific requirements so as to monitor and analyze all data quickly, easily and efficiently.

## Key features

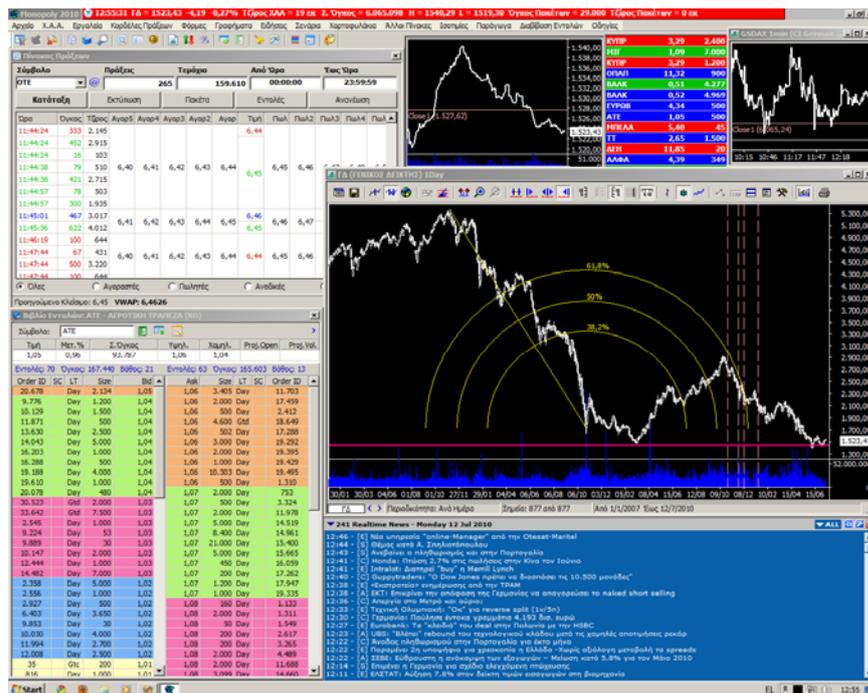

The increased demands of the modern investor have been fully accommodated in Monopoly's functionality which provides real time accurate stock market data feed updates. Monopoly includes the following:

- **Detailed monitoring** with customisable reporting as well as inclusion of a number of variables for each symbol (stock or index) as and when required by the user
- **Rich technical analysis by using** a considerable variety of oscillators and analytical tools ready to use.
- **Full historical database** for all stocks and indices; the user can search the database at any time to compare and analyse data.
- **Easy storing of** daily transactions (tick data) for all instruments.
- **Detailed classification** of portfolios with valuations for all users.
- **Timely notifications** for all symbols including a wide range of parameters to select from. Alert can be set according to traders' needs.
- **Dynamic interface of real time data** to Excel, Metastock, files etc.,
- **Real time Greek and international news updates** from multiple news agencies. News are indexed by news vendor and stock symbol.
- **Updated tickers** with filters, market option and symbols.
- **Dynamic creation, formation and storage** of multiple desktop windows (autonomous MDI) and customization by font, colour, size etc.
- **Easy administration** of symbols and products with drag-and-drop functionality.
- **Effective monitoring** of options in a different window-screen.
- **Automatic data retrieval** functionality provides the user with the option to monitor symbols at any time of the day when he logs in (via Internet).
- **Full order depth book capability** where the trader can view all the incoming orders one by one with full or selective summary

Data communication and transfer are available via the Internet and/or via satellite reception.

## Monopoly as a Platform

Monopoly can also be used as a data display monitoring tool for vendors who demand immediate and accurate solution to couple market feed with a reliable, customizable and comprehensive software terminal. Providing a combination of a user friendly tool with a functionality rich system, Monopoly Platform guarantees the complete and precise snapshot of every market in real time. All the above along with the experienced consulting and development team make Monopoly Platform the leading Real Time Market Data Monitoring System.

## Order routing via Monopoly

Monopoly is enriched with **order routing functionality** for the Greek and Cypriot capital market.

Monopoly is equipped with the appropriate order routing mechanism, giving the investor the option to trade stocks real time in

ASE while evaluating his portfolio.

The Order routing platform can be used inside the Brokerage house while receiving information via the back office system from different sources such as customers, portfolios, commissions, profit centers, residuals, shares, net position etc

Among the key features of **Order routing platform** are the following:

- Order routing per venue with real time update
- Connection with ODL (ASE stock links) & OMnet (ASE derivatives links)
- Support all types of orders
- Order Management (entry, modification, cancellation, filters)
- Effective management of multiple portfolios
- Real time portfolio valuation
- Support of Cash & Margin portfolios
- Support for commission scenaria per venue
- Commission calculation per venue
- Calculation of commission per order
- Support of multiple type of margin with different scenario
- Dynamic calculation of buying power for portfolio margin
- Limits calculation per user and profit center (order limits, credit limits)
- User management with access rights per profit center and/or per portfolio
- Margin calculation
- Provides alerts as set by the system and the user
- Support of FIX client and gateway to link with any third party system

Order routing also offer a number of benefit and characteristics to the retail investor such as:

- Order entry
- Edit or cancellation of orders
- Orders' monitoring with viewing filter
- Portfolio monitoring with real-time valuation
- Order execution monitoring
- Historical data of orders

Additionally, the system also provides for the broker and enables flexible and accurate management. In particular, it offers:

- Clients portfolio monitoring
- Multiple accounts management
- Reporting and printing

## Web Monopoly

Web Monopoly is the on line version of the reliable Monopoly application for real time data feed tool on the move, ideal for the trader who travels or want data feed over the Internet. The following are some of the capabilities of the web application:

- Easy access via the Internet from anywhere.
- Full reporting and view of the markets i.e. Athens Stock Exchange (ASE), Cyprus Stock Exchange (CSE) and Athens Derivatives Exchange (ADEX) as well as foreign and domestic indices.
- Customizable or ready to use forms with symbol and field entry / deletion.
- Clear graphs with daily and historical trends of the market.
- Convenient symbols' search by name, description, sector or category.
- Easy creation and storage by user defined group regardless when and where created.
- Running tickers with the environment's symbols.
- In-built links to other applications, i.e. Microsoft Excel (DDE).
- Valuable maintenance and evaluation of investment portfolios.

Monopoly has been developed with the market's needs in mind for flexibility, competitiveness and quality of information covering traders requirements (institutional & retail) who seek a terminal adjustable to their particular demands without wasting time.

## Mobile Monopoly

Mobile Monopoly is the version of Monopoly that offers the key highlight of the market to the investor's mobile or any other PDA. It is extremely user friendly and suitable for the investor who wants to keep up to date with all the market news. Among its key characteristics are the following:

- Secure access with username and password
- General index price (ASE)
- Selection of a stock or index from ASE or CSE
- Monitoring of prices, fluctuation and market depth
- Option to receive selection of prices on demand to avoid Internet charges
